Gyrus Group to Manufacture Medical Devices in Mexico

Reading, Berkshire, UK – based Gyrus Group PLC will soon begin the manufacture of its disposable instruments for minimally invasive surgery in Saltillo, Coahuila, Mexico in early 2007.

The company has signed a 10 year agreement with The Offshore Group for the rental of 34,822 square feet of industrial space, as well as for outsourced manufacturing support, or "shelter," services at the La Angostura Industrial in Saltillo, Coahuila.

Mexico is one of the world's premiere export platforms to the US and the rest of the world offering a high standard of manufacturing with significantly reduced costs.

Roy Davis, the Chief Operating Officer of Gyrus, commented:

"Gyrus operates in a global competitive market and sells over 80% of its products in dollars to highly price-conscious customers. As part of our strategy to increase our competitiveness we decided to establish a large manufacturing presence in Mexico.

"Having evaluated the various manufacturing options, we identified Shelter manufacturing with the Offshore Group as the best solution for Gyrus. The Offshore Group offers the highest standard of manufacturing, has a fantastic track record of good working habits and delivers high productivity levels. We are certain that The Offshore Group will provide an excellent, efficient service, minimising risk and maximising quality."

Gyrus Group PLC is a fast-growing medical device business dedicated to developing and providing class leading visualization and tissue management systems, instruments and services. Its leading edge procedure solutions continue to push back the boundaries of minimally invasive surgery – helping surgeons see more clearly and treat patients more effectively.
